

PORTER Models 4000 & 9000

PRECISION

you can trust

Model 4000

The Porter Model 4000 Regulator is a high performance miniature size pressure regulator. With a compact diameter of only 1 1/8", it fits easily into the smallest of instruments, yet its performance surpasses that of many competitive large diaphragm regulators. It is direct acting, non-relieving and provides minimal output change over a wide variation in supply pressure.

Model 4000AMVS30

Model 9000

The Porter Model 9000 Regulator is a compact, spring-loaded, diaphragm operated back pressure regulator. Designed specifically for precision regulation in low-flow gas applications, it controls upstream pressure rather than downstream pressure and is similar to a relief valve in operation.
